Spain

REGION: WESTERN EUROPE

Also included in this region: Finland, France, Germany, Ireland, Italy, Netherlands, Sweden, Switzerland, United Kingdom

PART I: ENROLMENTS AND INSTITUTIONS

The Spanish HE system best fits the unitary model. Just over 80% of the country’s students were enrolled in comprehensive universities in 2018, with the remainder attending HE programs within secondary schools. Enrolments rose by 10% between 2006 and 2018, a rate which lagged the rest of Western Europe. The number of HEIs rose even faster in our period of interest, causing average institution-size to decrease somewhat. Eighty-five percent of Spanish students attended public providers in 2018, compared to about 95% across the rest of Western Europe.

PART II: HIGHER EDUCATION FINANCING

Public HE spending in Spain rose sharply in the early years of our period of interest but then dropped in a pronounced fashion in the wake of the Global Financial Crisis. Overall, the level of expenditure in 2018 was 17% higher than in 2006, meaning cumulative growth was slightly below the average for the rest of Western Europe. Relative to GDP, spending in 2018 was about the same as in 2006, and a level about 30% below the average for the rest of Western Europe. Total expenditures of public universities grew at more or less the same rate as total public spending, while total expenditures at private universities increased significantly more quickly especially after 2016.

PART III: STUDENT FEES

All students in Spain pay fees, making it an undifferentiated fee-charging jurisdiction. At public universities, fee revenues per student more than doubled from 2009 to 2018, reaching USD 2,000 per student. Fees at private institutions were somewhat higher in 2018, at just over USD 3,000 per student, having fallen relative to 2006 but remained at a stable level since 2011.
PART IV: STUDENT FINANCIAL AID

Government student financial aid in Spain is grant-only. A loan program operated from 2008 to 2011 for Master’s students, but never served more than 0.25% of the student population. Average grant value fell somewhat between 2006 and 2018, but the number of recipients more than doubled. In GDP terms, disbursements rose somewhat to reach 0.1% of GDP, one-quarter the average for the rest of the Global North and a little over one-third the average for the rest of Western Europe.
